

Components of industrial automation are designed for long operation and living time. However, during the years and decades of operation some parts will not be available anymore on the market. Therefore some updates might be needed for control unit to guarantee availability of spare parts. Additionally to keep up with latest development, introduction of new technology requires upgrades to existing control units.

On the left side of the cabinet, there is a small white label with some text and a diagram. The text on the label is partially obscured but appears to be related to the equipment. The diagram shows a schematic of the control system, including a motor and various electrical components. The label is placed on the floor in front of the cabinet, and it is not clearly legible.

Officially, the machine is still in the process of being tested, but it is already being used for the production of 30-40 units per year.
